

Working safely, less accidents with machines

Get to it!

Do a check every day

A quick check of the most important matters before you start working with a machine.

- Have the moving or turning parts of the machine been covered?
- Are the machine and the parts in a good state of repair?
- Does the emergency stop work properly?

If the answer to one or more of the questions is 'No', solve the problem before starting your work.

Work according to these basic rules

Just do it. It prevents accidents.

1. Only work with machines you have received instructions for.
2. Only use the machine for its intended purpose.
3. Follow the user instructions.
4. Keep your distance from the machine's hazard zone.
5. Cleaning, performing maintenance or solving a fault? Always disable the machine first (switch off engine and remove key). For movable machines, also enable the brakes.
6. Never climb on top of a machine.
7. Confront co-workers if you see them use a machine unsafely.
